

# WHY INVEST IN A WATER SMART HOME?

## DAMAGE PREVENTION

**Automatically shut off water in a water emergency:**

A burst Washing Machine Hose can pump out 500 Gallons an hour onto your floor!

**Remotely monitor water** in your vacation homes or rental properties. No more water surprises.

**This year 1.4 million homes will file a water damage claim that averages over \$7,000. How much is YOUR Deductible?**

## FLOOD PROTECTION

**Limit how long or how much water can flow:** 17% of all water damage claims are caused by simple human error. Instead of coming home to a flooded house, imagine the relief if you received this text message: "The water in your home has been running too long. The water is being shut off now."

**The Seco Sys Water Management Platform understands "normal" water use, allowing it to identify "abnormal" conditions and shut water off immediately.**

## WATER CONSERVATION

**Monitor how much water you use:** Inefficient water use costs Americans \$60 million dollars a day! Use our online tools to easily set a "water budget" and monitor progress. Bills drop an average of 20% when actual water use is seen in real time, saving you money and conserving our dwindling water supply!

**Remotely control your water** on your terms from anywhere in the world!

**Even very small leaks are identified to save water, prevent damage and avoid conditions that can lead to mold.**
