

A Totally New Experience in Water Management!

www.WaterUseOnline.com

SITE MAP TOOLS: Accurately calculate the square footage of any landscape area. All irrigation components are located on your Google-based Site Map. Problems can be Geo-tagged for easy location in the field.

ET WEATHER DATA: Automatically access ET weather data, current and historical, to help manage water consumption and create water budgets best suited to your customer's location and plant mix.

CENTRALIZED DOCUMENT ACCESS: Store videos, pictures, even Controller Manuals in a single, easy to find location.

MANAGE YOUR CLIENTS: Easily audit your customer's water use in real time, generate relevant reports, and share the results of your efforts with your customers. Use the dashboard to track repairs or plant health, and document all water management improvements made.

AUTOMATIC DATA COLLECTION: When used in conjunction with Seco Sys Water Management products, it evolves into a full scale Water Management Platform, automatically reporting water consumption, flow rates, and analyzing water use data. All of this can be achieved from literally anywhere in the world!

REMOTE VALVE CONTROL: Control valves remotely via computer, tablet or smartphone. Our installed hardware also provides automatic valve shut-off and notification of events such as high flow.

MANUAL DATA ENTRY CAPABLE: WaterUseOnline can be used as a "stand alone product" for manual entry of meter readings and other data, and still provide powerful analytics.

IRRIGATION OPTIMIZATION: Generates a "prescription for optimal irrigation" which allows any simple timer-based irrigation system to be programmed for efficient water consumption without having to rely on "on-site math."

What water use do you want to manage?

- All
- Building
- Cooling Tower
- Farm
- Golf Course
- Grove *Volumetric Irrigation*
- Home *Manage & Quantify consumption for non-landscape water.*
- Landscape
- Pond
- Swimming Pool
- Water Feature
- Water Storage Tank
- Well *Manage well draw & replenishment rates.* *Monitor Tank Levels*

Solar Powered/WirelessConnectivity

What devices do you want to integrate?

- All *Seco Sys products add remote data access, valve & pump control.*
- HydraMeter *A single point to collect and manage all controller data.*
- HydraPod
- Irrigation Controller
- Level Sensor *Measure and Monitor well and tank levels.*
- Pressure Sensor
- Water Meter *Measure and Monitor water pressure.* *Manual Entry Enabled*

**Finally.
Total Water Control.**
